

TRAVELYT OPERATIONS POLICY

Launch Policy Packet

Service/shipping rules, privacy, customer terms, prohibited items, refunds and claims, custody proof, driver/admin controls, booking control, incidents, and launch-ready paperwork

Status	Internal operational draft for launch testing; not final legal advice.
Applies to	travelyt.us, iOS app, booking requests, admin portal, driver portal, support, and manual partner workflows.
Public links	https://travelyt.us/privacy , /terms , /prohibited-items , /support , /driver/apply .
Owner	Travelyt operations / admin.
Version	v0.2 - June 2026.
Important	Do not print active admin passwords, driver access codes, Stripe keys, Supabase keys, or customer private data inside this packet.

Core truth: The policy set has to protect the actual service promise. Do not promise airline check-in, TSA clearance, DHL/cargo shipment, same-flight movement, background approval, insurance coverage, or privacy handling unless that exact lane is operationally true for the booking.

1. How To Use This Packet

This packet is the paper baseline for launch operations. It turns the website summaries and admin/driver workflow into policies that staff can follow, customers can understand, and partners can review. It is written for practical launch control, not to replace counsel, insurance, airport, airline, TSA, FAA, payment, or vendor review.

- Use it before a live test with Mo, a driver, a customer, or a partner.
- Use it to decide whether a booking is ready, blocked, refundable, claimable, or unsafe.
- Use it to keep public website language, App Store privacy answers, and internal workflow aligned.
- Update it after carrier partner terms, insurance policy, and background-check/MFA vendor flows are finalized.

2. Policy And Document Inventory

Doc / policy	Where it lives	Current role	Next action
Privacy Policy	Public: /privacy	Explains collected data, uses, sharing, retention, AI/automation, deletion, and privacy rights.	Counsel review; keep App Store privacy answers matched to actual collection.
Terms of Service	Public: /terms	Plain-language customer service baseline, restricted items, coverage, AI limitations, payment and launch status.	Expand into counsel-final terms before scaled paid launch.
Prohibited Items	Public: /prohibited-items	Customer-facing bag safety and refusal list.	Quarterly TSA/FAA/airline/vend or review.
Service / Shipping Policy	This packet	Defines what Travelyt means by service, custody, handoff, shipping, booking control, and carrier/cargo lanes.	Create public /shipping or /service-policy page when final.
Refunds / Claims	This packet + /terms	Launch-stage refund, cancellation, loss, damage, incident, and coverage handling.	Confirm insurance carrier, coverage cap, timelines, and claim forms.
Driver/Admin Workflow	Doc 17 + this packet	Admin access, driver codes, assignment, status path, proof/GPS checks, stale-code handling.	Replace manual approval with a real driver review queue when built.
Incident Report	This packet	Paper form for missed pickup, prohibited item, damage, lost bag, bad proof, stale code, or privacy issue.	Build admin incident form when ready.

3. Service, Shipping, And Custody Policy

Owner	Operations / dispatch
Public status	Partly public through /terms and /prohibited-items; full shipping/service policy is paper-only today.
Launch rule	Use this as the operating rule today; have counsel/vendor partners review before scaled rollout.

Travelyt should use the word shipping carefully. For customers, the normal launch service is luggage pickup, custody, tracking, airport handoff, airport release, or destination delivery. If a third-party carrier/cargo partner handles a leg, that leg needs its own carrier terms, tracking, liability, prohibited-items review, and customer disclosure.

Lane	What it means	Allowed promise	Blocked promise
Departure luggage service	Travelyt picks up bags, verifies readiness, seals/weights, drives to airport/authorized handoff point, and records proof.	Travelyt coordinates pickup, custody, GPS/proof, and airport/airline handoff when confirmed.	Do not promise the airline accepts the bag, TSA clears it, or the bag boards the customer's plane unless confirmed.
Arrival luggage service	Travelyt receives/retrieves a released bag and delivers it to customer or recipient.	Travelyt records release, driver GPS, delivery proof, and customer/recipient closeout.	Do not claim Travelyt controls airline baggage delivery delays.
City-to-city / cargo / shipping lane	A future or partner lane where bags are tendered to a regulated carrier or courier network.	Only say this if the carrier agreement, label, tracking, liability, and restricted-item terms are active.	Do not use DHL, carrier, IAC, TSA-regulated, or cargo language as marketing filler.

Minimum Service Rules

- No custody starts until admin can identify the customer/traveler, the bag, the service lane, and the next handoff.
- Every bag needs a booking/reference ID, bag count, service type, pickup/release location, contact, timing window, and restricted-item attestation.
- If service feasibility is uncertain, the booking stays pending or issue; it does not become assigned or in custody.
- If the job involves an airline, airport, carrier, DHL, cargo, TSA, or regulated partner handoff, staff must confirm the current partner process before telling the customer the step is guaranteed.

4. Privacy And Data Handling Policy

Owner	Privacy owner / admin
Public status	Public through /privacy; required for App Store privacy link.
Launch rule	Use this as the operating rule today; have counsel/vendor partners review before scaled rollout.

Travelyt collects data because the service depends on identity, route, bag, payment, contact, proof, and custody records. The privacy policy must match the real app, App Store answers, and vendor behavior. It cannot be aspirational.

Data type	Examples	Use	Handling rule
Identifiers/contact	Name, email, optional phone, account details.	Quote, booking, support, status updates, account access.	Collect only what the workflow needs; phone stays optional unless a real service step requires it.
Trip and bag details	Pickup/delivery address, airport, flight, date, bag count, handling notes.	Pricing, feasibility, dispatch, custody, customer support.	Do not expose customer route details outside assigned staff/drivers/partners.
Payment data	Stripe session, payment status, receipt metadata.	Checkout, refunds, disputes, accounting.	Do not store full card number, CVV, or wallet credentials in Travelyt systems.
Identity/proof	ID status, selfie/liveness reference, seal ID, bag photos, signatures, handoff recipient notes.	Custody readiness, claims, fraud prevention, handoff proof.	Store the minimum proof needed; avoid photographing private employee IDs unless agreement allows.
Location/device	GPS checkpoints, timestamp, accuracy, IP/device/app logs.	Driver route proof, security, troubleshooting, push notifications.	Use checkpoint GPS first; do not expand to background tracking without a separate privacy and consent review.

Privacy Operating Rules

- Privacy requests go to privacy@travelyt.app; support issues go to support@travelyt.app unless they include data deletion, access, correction, or breach concerns.
- If customer data is deleted, retain only records legally or operationally required for payment, accounting, disputes, claims, completed custody logs, fraud prevention, or safety.
- Do not use trip, location, account, payment, or custody data to train third-party AI models.
- If the app collects a new data type or integrates a new SDK/vendor, update the public privacy policy and App Store privacy answers before release.
- If there is a data/security incident, preserve logs, stop the exposure, identify affected data, notify leadership, and evaluate legal notice obligations before informal texting about details.

5. Customer Terms And Responsibility Policy

Owner	Operations / support
Public status	Public through /terms; legal final still required.
Launch rule	Use this as the operating rule today; have counsel/vendor partners review before scaled rollout.

The customer agreement should be plain: Travelyt coordinates luggage service, but the customer remains responsible for correct booking information, legal contents, accessible handoff, airline baggage rules, IDs, and required review steps.

Customer must	Why it matters	Admin response if missing
Provide accurate details	Wrong address, airport, date, flight, contact, or bag count can break dispatch and liability.	Keep pending or issue until corrected.
Be available for pickup/release	Custody cannot begin or end without an authorized person or approved unattended process.	Reschedule, cancel, or charge/manual-review wait time if policy allows.
Confirm bag contents	Prohibited/hazmat/regulated items create TSA/FAA/airline/carrier and safety risk.	Refuse, pause, or return the bag; document the issue.
Complete identity/proof steps	Custody and claims need the right customer/traveler/bag connection.	Block custody or create supervised exception with admin approval.
Pay approved fees	Payment reserves the request, but operational feasibility still has to be confirmed.	Do not assign unpaid or infeasible jobs.

Plain-language rule: A paid checkout does not automatically mean Travelyt can physically serve the route. Admin must still confirm timing, driver availability, service lane, airport/carrier constraints, and prohibited-item readiness before custody begins.

6. Prohibited And Restricted Items Policy

Owner	Operations / safety
Public status	Public through /prohibited-items; must be kept current with TSA/FAA/airline/vendor guidance.
Launch rule	Use this as the operating rule today; have counsel/vendor partners review before scaled rollout.

Travelyt can refuse, pause, cancel, return, or escalate any bag that cannot be verified against prohibited-item rules. The final authority may be the airline, TSA officer, FAA hazardous-materials rule, airport, carrier, law enforcement, or destination rule.

Category	Examples	Launch rule
Weapons / explosives	Firearms, ammunition, fireworks, flares, realistic weapons, stun devices, pepper spray.	Do not accept unless a written, counsel-reviewed special handling policy exists. None exists for launch.
Hazardous materials	Fuel, lighter fluid, paints, solvents, corrosives, compressed gas, dry ice beyond limits, radioactive/toxic/infectious materials.	Reject or require manual safety review before pickup.
Batteries / powered devices	Loose lithium batteries, power banks, smart bags, scooters, hoverboards, damaged/recalled batteries.	Follow FAA PackSafe and airline rules; spare lithium batteries/power banks must stay with passenger.
Illegal/regulated items	Illegal drugs, cannabis where transport is not legal, counterfeit goods, alcohol/tobacco/vape/medication when not allowed.	Do not accept unless legality and carrier/airline rules are confirmed.
Keep-with-passenger items	Passports, IDs, keys, wallets, cash, medicine, electronics, jewelry, irreplaceable documents.	Advise customer to carry them; coverage may exclude them.
Fragile/perishable/unusual	Perishables, leaking liquids, fragile valuables, plants, live animals, oversized or overweight items.	Manual review required; may be refused.

Customer script: If you are unsure whether something is allowed, keep it with you or ask Travelyt before pickup. If we cannot verify it, we may refuse the bag.

7. Refund, Cancellation, And Claims Policy

Owner	Support / operations / finance
Public status	Partly public through /terms; full claims process is paper-only today.
Launch rule	Use this as the operating rule today; have counsel/vendor partners review before scaled rollout.

This is a launch default, not a final insurance policy. Use it to avoid random one-off decisions, then have counsel and the insurance carrier lock the final terms.

Situation	Default action	Required record
Travelyt cannot serve route before custody	Cancel or modify. Refund Travelyt service fee for unserved work.	Reason, customer notice, booking status, payment/refund record.
Customer cancels before driver assignment and more than 24 hours before pickup	Refund unless direct costs or special reservation costs were already incurred.	Cancellation request timestamp and admin decision.
Customer cancels after driver assignment or within 24 hours	Manual review; refund may be reduced by direct costs, driver cost, or failed handoff cost.	Driver status, costs, customer communication.
Custody already began	No automatic refund. Evaluate service failure, delay, damage, loss, or safety issue through claims/incident process.	Custody log, proof, photos, seal status, GPS.
Visible damage / seal issue	Open claim immediately; preserve bag, seal, photos, receipt, and chain-of-custody record.	Incident form and proof packet.
Lost bag / missing contents	Open claim; determine last verified custody point and whether excluded/prohibited items were involved.	Full chain-of-custody, contents claim, receipts.

Claim Timelines And Coverage

- Damage claims: customer should report as soon as discovered and no later than 15 days after actual delivery unless counsel/insurance sets a different rule.
- Lost-item claims: customer should report as soon as discovered and no later than 30 days after expected delivery unless counsel/insurance sets a different rule.
- Launch public terms currently reference standard coverage capped at \$500 per bag while in Travelyt custody; this must be confirmed against the actual insurance policy before scaled rollout.
- Excluded categories include prohibited items, cash, passports/IDs, jewelry, irreplaceable documents, medicine, fragile valuables, normal wear and tear, cosmetic damage, poor packing, and items customer was told to keep with them.

8. Driver, Admin, And Access-Code Policy

Owner	Admin / dispatch
Public status	Internal only; summarized in Doc 17.
Launch rule	Use this as the operating rule today; have counsel/vendor partners review before scaled rollout.

Driver access is a custody credential, not an employment approval and not a background-check substitute. One code belongs to one named driver. The full code is shown once, sent privately, and revoked after termination, suspected sharing, stale tests, or incidents.

Control	Pass condition	Failure
Admin login	Admin can open /admin and see booking/driver-code areas.	Anyone without admin role can create/revoke codes or move admin-only statuses.
Driver code	One active code maps to one exact courier name.	Generic code can impersonate another driver.
Driver login	Driver opens /driver, enters exact name/code, sees session.	Wrong name/code or stale code is accepted.
Assignment	Admin assigns confirmed booking to the same driver name.	Driver sees no job or sees another driver's job.
Status path	Booking moves in order and audit history records actor/reason.	Custody status jumps without proof or admin exception.
Cleanup	Test codes/bookings are revoked, archived, or clearly labeled after the run.	Stale rows stay active and confuse live operations.

Stale-code interpretation: A stale, expired, revoked, or wrong-name code being caught can be a good signal. The workflow is failing only if stale credentials are accepted, the wrong courier can act, or custody moves without required proof/GPS/admin review.

9. Booking Request Control Policy

Owner	Operations / admin
Public status	Public booking/quote flow only.
Launch rule	Use this as the operating rule today; have counsel/vendor partners review before scaled rollout.

Travelyt public/customer-created bookings must start as pending requests. The public side can collect trip, bag, contact, pickup, delivery, and handling details, but it cannot create a paid, assigned, accepted, tendered, or completed operational state without an operations action or payment confirmation.

Control	Launch rule	Admin use
Public request	Creates pending booking/request only.	Review feasibility, price, payment path, customer identity, driver availability, and service lane.
Payment	Payment confirmation can move a pending booking to paid through the approved checkout/webhook path.	Assign driver only after confirmed payment or approved manual exception.
Driver assignment	Only admin/operations assigns a driver to a confirmed booking.	Driver sees job only when assigned or eligible.
Status movement	Driver can move only allowed custody statuses and only with proof/GPS gates.	Admin can override only for documented operations cleanup.

- Public booking requests must be treated as unconfirmed until admin verifies feasibility and payment path.
- Customer/customer-support notes can be preserved in the booking, but they do not replace admin confirmation.
- If Travelyt later needs a new customer request channel, it should be reintroduced as an approved feature with privacy, terms, and route review.

10. Custody, Proof, And GPS Policy

Owner	Driver ops / admin
Public status	Internal; customer sees proof through booking status where available.
Launch rule	Use this as the operating rule today; have counsel/vendor partners review before scaled rollout.

Custody means Travelyt is responsible for the next verified movement of the bag. Every custody stage should leave proof: who acted, what bag, where, when, what condition, and what next handoff was approved.

Stage	Required proof	Blocked if missing
Before pickup	Customer/traveler identity, service lane, bag count, restricted-item attestation, payment/confirmation status.	Custody cannot begin.
Route start	Driver identity/session and GPS checkpoint.	Driver cannot claim en route status.
Arrival	Arrival GPS checkpoint at custody location.	Driver cannot jump to custody/proof.
Pickup/seal	Seal ID, bag photo, customer/authorized handoff confirmation, identity/bag review complete.	Picked-up status blocked.
Airline/airport handoff	Receiving person/company, acceptance reference where allowed, seal status, photo, GPS/timestamp.	Departure delivery/accepted-by-airline status blocked.
Arrival release/delivery	Release proof, recipient/customer confirmation, delivery photo, GPS/timestamp.	Delivery closeout blocked.

Privacy/safety limit: Do not photograph private airline, airport, or employee IDs unless a written agreement allows it. Record name, company, badge/reference text, location, time, and proof image instead.

11. Incident And Exception Policy

Owner	Admin / support
Public status	Internal; customer notices are handled through support.
Launch rule	Use this as the operating rule today; have counsel/vendor partners review before scaled rollout.

An incident is any event where the normal service promise, custody proof, safety rule, privacy rule, payment/refund expectation, or credential control is broken or uncertain. Do not hide incidents in chat; log them.

Incident type	Immediate action	Closeout condition
Missed pickup / route delay	Notify customer, mark issue if needed, document driver/location/status.	New ETA, reschedule, refund, or cancellation decision is recorded.
Prohibited item concern	Pause custody or refuse pickup; escalate to admin; involve authorities only when required.	Bag returned/refused/cleared with written reason.
Damage / lost / seal issue	Preserve proof, photos, chain-of-custody, seal, receipts, and customer statement.	Claim accepted/denied/resolved with evidence and payment/refund record.
Wrong driver / stale code	Revoke code, block session if possible, reassign job, log security/control event.	New code or driver assignment is verified and stale artifact archived.
Privacy/security event	Stop exposure, preserve logs, identify affected records, notify leadership.	Counsel/notification assessment complete and remedial action logged.
System/payment failure	Keep booking pending/issue; do not tell customer paid/confirmed unless payment and record both succeeded.	Recovery or refund path is documented.

12. Records Retention And Cleanup Policy

Owner	Admin / privacy / finance
Public status	Public partly through /privacy.
Launch rule	Use this as the operating rule today; have counsel/vendor partners review before scaled rollout.

Retention should be long enough to support service, claims, taxes, accounting, disputes, fraud prevention, and safety, but not so long that stale test data pollutes live operations.

Record	Default retention	Cleanup rule
Quote/request records	Up to 24 months unless converted to booking or needed for dispute/fraud.	Delete or anonymize stale unconverted leads when no longer useful.
Completed booking/custody logs	Typically 3 years unless claim/legal/insurance need is longer.	Retain proof history, status history, and incident references.
Payment/accounting records	Up to 7 years or as required for taxes/accounting/payment disputes.	Never store full card numbers or CVV.
Driver applications/background references	Retain only as needed for screening, legal, safety, and vendor obligations.	Do not leave unapproved applicants with active access codes.
Test data	Shortest practical period.	Archive, revoke, or clearly label after smoke/live test.
Privacy deletion requests	30-day target response unless legal exception applies.	Verify identity, delete eligible data, retain only required exception records.

13. Public Compliance And App Store Policy

Owner	Product / App Store admin
Public status	Public through site pages and App Store Connect metadata.
Launch rule	Use this as the operating rule today; have counsel/vendor partners review before scaled rollout.

The App Store and public website need to tell the same data and service story as the product. If App Store privacy answers, the privacy policy, the app permissions, and the actual service flow disagree, that is a review and trust problem.

Surface	Must show	Mismatch to avoid
Privacy URL	Public, accessible privacy policy URL.	Broken privacy link or policy that omits location/identity/proof/payment vendors.
App privacy answers	All collected data types and partner SDK data, linked/unlinked status, tracking status, purpose.	Declaring less data than the app/website actually collects.
Account deletion	Clear path for account/data deletion from app/website/support.	Collecting account data with no deletion path.
Terms and prohibited items	Customer responsibilities, restricted items, coverage, refund/claims, launch status.	Promising airline/TSA/cargo/coverage capability not actually active.
Review/demo access	Seeded customer/driver/admin or dispatcher flows when Apple needs to verify all account types.	Only giving customer flow when app has driver/admin surfaces.

Public Pages Still Missing Or Too Thin

- A dedicated Service / Shipping Policy page, if Travelyt wants a public page separate from Terms.
- A dedicated Refunds / Claims page, if customers need a cleaner support link than the full Terms.
- A driver onboarding/admin approval page inside the admin portal, if manual access-code creation becomes too error-prone.
- A booking-request control note on the public customer flow, if support needs one.

14. Live Test Go / No-Go Checklist

Check	Pass condition	Pass/fail
Public links	/privacy, /terms, /prohibited-items, /support all open.	
Public booking request	Customer-created booking/request starts pending and cannot spoof paid/assigned state.	
Admin login	Admin opens /admin and sees booking queue and driver-code controls.	
Driver code	One active code for exact test driver; no shared generic code.	
Driver login	Driver opens /driver and sees assigned job only.	
Booking status	Job moves through paid/assigned/accepted/en_route/arrived/picked_up/in_transit/delivered as appropriate.	
GPS/proof	Route start, arrival, seal/pickup, handoff/delivery proof gates work or block clearly.	
Incident path	Admin can mark issue, resolve/archive stale test data, and revoke test code.	
Policy handoff	Customer/driver/admin know prohibited items, privacy/data handling, refunds/claims, and custody proof expectations.	

15. Printable Forms

Customer Service And Bag Attestation

Booking ID	_____
Customer / traveler	_____
Authorized pickup person	_____
Authorized release person	_____
Service type	_____
Pickup location	_____
Airport / destination	_____
Travel date / flight	_____
Bag count / descriptions	_____
Staff initials	_____

- ☐ Customer confirmed no prohibited or undeclared restricted items.
- ☐ Customer kept passports, IDs, medication, cash, keys, jewelry, electronics, and irreplaceable items with them.
- ☐ Customer understands airline, TSA, FAA, carrier, and airport rules may override Travelyt service.
- ☐ Customer understands payment does not start custody until admin confirms feasibility.
- ☐ Customer signature / approval captured: _____ Date: _____

Driver Live Run Sheet

Driver name	_____
Access-code preview	_____
Booking ID	_____
Assigned service	_____
Vehicle / phone	_____
Start GPS/time	_____
Arrival GPS/time	_____
Seal ID / bag proof	_____
Handoff / delivery proof	_____
Admin closeout	_____

- ☐ Driver used their own exact name and active access code.
- ☐ Driver saw only assigned/eligible job.
- ☐ GPS checkpoints captured for route start and arrival.
- ☐ Bag proof and seal proof captured before custody advanced.
- ☐ Any exception was logged before continuing.

Incident / Claim Report

Incident ID	_____
Booking ID	_____
Customer / driver	_____
Incident type	_____
Time discovered	_____
Last verified custody point	_____
Evidence collected	_____
Customer notified by	_____
Refund / claim decision	_____
Closeout owner	_____

- ☐ Photos, GPS, seal ID, receipts, proof history, and customer statement attached.
- ☐ Admin determined whether the issue is service failure, prohibited item, stale code, privacy/security, payment, or partner/carrier issue.
- ☐ Customer received written next step.
- ☐ Stale test data/code archived or revoked if applicable.

16. Counsel, Insurance, And Vendor Review Punch List

- Confirm Travelyt legal entity name, business address, support/legal/privacy/claims contacts, and whether public seller name should be Travelyt, Inc.
- Confirm whether Travelyt is only luggage courier/airport handoff, or also using a regulated carrier/cargo/shipping partner for any lane.
- Review customer Terms, arbitration/class waiver, limitation of liability, refund terms, chargeback/dispute handling, and state law venue.
- Confirm insurance coverage: care/custody/control, cargo or motor-truck cargo, commercial auto, CGL, errors/omissions, cyber/privacy, and declared-value upsell.
- Review prohibited items against TSA, FAA PackSafe, airlines, airports, carrier/DHL/cargo partners, and state/federal controlled-substance rules.
- Review driver classification, background-check consent, MVR, FCRA/adverse-action workflow, ID/liveness vendor, MFA, and access-code records.
- Review privacy policy against actual collected data, Apple privacy labels, Stripe/Supabase/Resend/Twilio/analytics/push vendors, GPS/proof capture, AI usage, deletion rights, and breach notice requirements.
- Confirm any future partner/cargo workflow is intentionally approved before adding it to Travelyt.

17. Source References Used For This Draft

This packet was drafted from Travelyt's current repo pages and operating docs, plus public regulatory/platform guidance checked during drafting. These links are not a substitute for counsel or vendor review.

Source	Why it matters
Travelyt repo: /privacy	Public privacy policy: data categories, use, sharing, retention, AI, deletion, contact.
Travelyt repo: /terms	Public terms baseline: service, customer duties, identity, custody, restricted items, coverage, AI, payment.
Travelyt repo: /prohibited-items	Public prohibited-item categories and TSA/FAA links.
Apple App Privacy Details	App Store privacy labels must reflect actual data collected by the app and partners.
FTC mobile app guidance	Marketing/privacy statements must be truthful; non-obvious collection/sharing and sensitive data need clear disclosure/consent.
California DOJ CCPA resources	Consumer privacy rights and privacy-policy expectations, especially access/deletion/correction/opt-out disclosures where applicable.
TSA What Can I Bring / Travel Tips	TSA/airline rules and final screening authority affect what Travelyt can accept.
FAA PackSafe / lithium battery guidance	Hazardous materials and battery rules affect checked baggage/cargo service.
